

## K5213

### *Flat-top Barge*

The KOOLE Stan Pontoon is a heavy constructed modern non-propelled pontoon built to standard design under full class. The Damen pontoon can be used for various operations on inland waters, in harbours, estuaries and deep sea. The pontoon is designed for the transport of general cargo on deck. The construction of the pontoon is based on a longitudinal framing system in combination with a transverse web frame system. Due to the utilisation of the pontoon, a special strong construction with extra local strengthening in bottom fore and aft ship, deck and sheer strake and a heavy welding system are used. The main deck has extra thickness above the class requirements in order to generate a wear layer, this to withstand the heavy usage of the pontoon. Except the bollards, the pontoon has a flush steel deck from fore to aft.
